

/\*Class to create key/value pairings between the prefacture number and the fecha status for later comparison. Takes two parameters, one is final and is the prefacture Number. The prefacture Number gets associated with the corresponding fecha status from the excel sheet  
\*/

```
public class Entry<K,V> {  
  
    private final K PrefactureNum;  
  
    private V fechaStatus;  
  
    //Constructor  
    public Entry(K num, V fecha){  
        PrefactureNum = num;  
        fechaStatus = fecha;  
    }  
  
    //getter & setter methods  
    public K getPreNum(){  
        return PrefactureNum;  
    }  
  
    public V getFecha(){  
        return fechaStatus;  
    }  
  
    public V setFecha(V fecha){  
        V oldFecha = fechaStatus;  
        fechaStatus = fecha;  
        return oldFecha;  
    }  
  
    public String toString(){  
        return "(" + PrefactureNum + ", " + fechaStatus + ")";  
    }  
}
```
